# WELCOME

Based in Dooradoyle, Limerick, we are proud to be the only clinic in the area specialising in Facial Electrolysis — the gold standard for permanent hair removal. Over the years, I have built a large and loyal client base, which I believe is a reflection of the genuine care, value for money, and exceptional service I offer to every person who walks through my door.

# TRULY PERMANENT HAIR REMOVAL

Unlike laser, which only reduces hair growth and often requires ongoing sessions, facial electrolysis destroys each hair follicle individually, leaving it unable to grow back. Once it's gone — it's gone for good.

Once a follicle is treated successfully, it won't grow hair again. That's why electrolysis is considered the gold standard for permanent facial hair removal.

## SUITABLE FOR ALL SKIN AND HAIR TYPES

Whether your hair is light, coarse, or fine, electrolysis targets each follicle individually—making it ideal for anyone.

Electrolysis targets the follicle directly, regardless of the hair's color, texture, or the client's skin tone. It is the perfect solution for:

- Light or white hairs on the chin, lip, or brows.
- Darker skin that is at risk of pigmentation from laser.
- Residual fine hair left behind after laser treatments.

## PRECISION FOR DELICATE & HORMONAL AREAS

The face, especially the upper lip, chin, and eyebrow line, requires meticulous detail.

- Pinpoint Accuracy: Electrolysis treats one hair follicle at a time, making it uniquely suited for:
  - Precise eyebrow shaping.
  - Targeting scattered, stubborn hairs.
  - Treating hairs caused by Polycystic Ovary Syndrome (PCOS) or other hormonal imbalances, where hair growth can be erratic and new growth continues to emerge.

# SAFER FOR SENSITIVE FACIAL SKIN

- **Reduced Risk:** Because the electrical current is precisely delivered to the root and not absorbed by the surrounding skin's pigment (as with laser), the risk of surface damage, burning, or permanent pigmentation changes on the face is minimal when performed by an expert.
- **Improved Skin Health:** Electrolysis eliminates the need for harsh, temporary methods like daily shaving, which causes razor burn and stubble, or waxing/tweezing, which can lead to inflammation and ingrown hairs. Over time, your facial skin will become smoother, clearer, and healthier.
